

Movie Booking System

Seamless search, selection, and
booking for moviegoers

Target Users

“This system is designed for everyday moviegoers who want a fast and intuitive way to find and book movies.”

“Also be extended for theater staff to manage listings and bookings.”

“The interface is simple, responsive, and built for ease of use.”

Implemented Features

“Search movies by title, genre, date, and location”

“View detailed movie info including cast, runtime, and showtimes”

“Book tickets by selecting showtime, seats, and price”

“Store bookings in MongoDB for future retrieval”

“These features support the core business goal: helping users find and book movies quickly and accurately.”

Demo Flow

Want a sneak peak into the prototype?

: “Let’s jump into the live demo so you can see how it all works.”

What's Next

“Add user login and registration”

“Implement booking history and cancellation”

“Add seat availability logic”

“Style the interface with themes and animations”

“Optional: Admin dashboard for managing movies”

“These additions will make the system more complete and user-friendly by the final demo.”
